WORK EXPERIENCE

Impero IT Services

Software Engineer

Feb 2026 - Present

- Node.js developer working on scalable Backends with MongoDB.

Vagaro Technologies, Ahmedabad Gujarat

MongoDBA

Jan 2025 - Jan 2026

- As a MongoDB Administrator, I specialize in enhancing database performance and scalability. My responsibilities include optimizing queries, guiding developers on best practices, and devising effective indexing strategies.
- I leverage my Node.js skills to build custom scripts for analyzing production logs and identifying slow queries. I have hands-on experience monitoring large-scale databases—including a single collection with over 240 million user records—and have been integral to scalable schema design. Additionally, I developed the complete strategic plan for our production database upgrade from MongoDB 6 to 8.

CMARIX, Ahmedabad Gujarat

Jr. Developer

Sep 2022 - Dec 2024

- As a backend developer, I specialize in Node.js and Express.js, with deep experience across a range of databases including MongoDB (Mongoose), MySQL (Sequelize), and MSSQL. I am proficient in TypeScript and have also built interactive dashboards in AWS QuickSight. My background in a service-based company has made me highly adaptable, with a proven ability to deliver on diverse project requirements.

Infinium Global Technologies, Ahmedabad Gujarat

Trainee Engineer

Jan 2022 - Jul 2022

- Assigned to develop the Zentixs Desk product, building a MERN-stack ticketing system that enabled client submissions, manager assignments, and full ticket lifecycle management ('Pending', 'In Progress', 'Resolved').

EDUCATION

Gujarat Technological University (GTU), Ahmedabad

Bachelor of Engineering(BE) - Computer Engineering - 8.59 CGPA

2018 - 2022

HIGHLIGHTED PROJECT

Carnivalist Project

Dec 2022 - April 2023

- This project involved developing a complete event management platform. The system consisted of two web applications: a customer-facing portal for viewing and joining events, and a backend application for internal use by Admins and Staff.
- My role focused on the backend application, where I was responsible for creating the RESTful APIs, designing the MongoDB database schema, and implementing all core business logic.
- Technologies: Node.js, Express.js, MongoDB

Agent360 Project

July 2023 - Oct 2023

-

The motive of this project is to manage agents and customers. There are two applications: one for customers and another for agents, along with an admin panel accessible from the Agent App. This is a web application. I worked on both the customer and agent sides.

- My role was to create APIs and assist frontend React developers in implementing these APIs. Additionally, we utilized serverless architecture in this project.
- Technologies: Node.js, Express.js, MySQL, AWS S3, AWS Lambda

VivaChefs Project

June 2024 - Sep 2024

- This project is an online chef-booking platform where customers can book chefs based on available time slots. We built two mobile applications: one for chefs, where they can add their available slots, cuisines, and dishes with pricing; and another for customers, where they can browse nearby chefs, place orders, and make payments.
- There is also a customer web application with the same features as the customer mobile app, along with an admin panel that allows administrators to view dashboards, manage offers, track revenue, and handle listings of chefs, customers, and other administrative functions.
- My role in this project was to design the database and develop APIs for all modules.
- Technologies: NodeJS, Express.js, Typescript, MongoDB, Firebase, Stripe

Vagaro MongoDB Database

Jan 2025 - Present

- Achieve superior application speed through advanced MongoDB Performance Optimization and strategic Indexing Strategies.
- Design highly scalable and efficient database structures via optimized MongoDB Schema Design.
- Ensure business continuity by managing reliable Backup and Restore processes and executing seamless MongoDB Version Upgrade Plans.
- Maintain deployment health and security by utilizing MongoDB Atlas Monitoring and implementing stringent Security Standards.
